- A – Excellent. Volumetric swell is less than 10% after exposure.
 B – Good. Limited exposure is recommended.
 C – Fair. Volumetric swell is between 20% - 40% after exposure. Limited Exposure and frequent O-ring replacements may be necessary.
 D- Poor. Not suitable for these types of reactions/conditions.

¹ We cannot be responsible for use of the above data in specific application. Immersion testing under actual conditions is always recommended. For specific chemical resistance, Please call our office for technical information at 800-472-1658.

² Fluorinated products should never be exposed to molten or gaseous alkali metals such as sodium or potassium since vigorous exothermic reaction may occur.
